

Research Associate Organic Synthesis

Responsibilities:

- Plan and execute the synthesis, purification and characterization of new chemical entities to develop the SAR that emerge within the drug discovery programs.
- Become fluent in structure-based drug discovery and use this methodology in the design and synthesis of new compounds for lead identification and lead optimization efforts.
- Report the details of experimental chemistry and related data where appropriate.
- Maintain a safe, clean laboratory area and a proper laboratory notebook.

Qualifications:

- B.S. or M.S. in chemistry with an emphasis on organic synthesis
- 2+ years experience in medicinal chemistry; structure-based drug discovery experience is preferred
- Thorough knowledge of modern analytical techniques with an ability to perform multi-step organic synthesis
